

BRIEF BIODATA: ARNSTEIN AARSET

Mr. Aarset has 30 years of experience working with engineering design and construction of underground works, related to railway, roads and hydropower projects. Through a number of project assignments on the following up of ongoing tunnel construction contracts, he has gained unique experience on the challenges and in the complexity of the typical Scandinavian approach of risk sharing between the Contractor and the Owner. Another speciality of Mr. Aarset is the preparation of tender documents for tunnels and underground works. Mr. Arnstein has extensive experience from working on projects in Africa, South America, Europe and Asia. In South Asia Mr. Arnstein has worked on underground projects in India and Bhutan. He is a member of the Norwegian Tunnelling Society and has contributed to several handbooks published by the society including “Heavy rock support for underground constructions and “Practical grouting for underground constructions”.
